SUMMARY

Full-stack Software Engineer (B.Tech Computer Science, CGPA 9.34) specializing in the MERN stack, with a track record of applying sound engineering principles to design, build, and ship production-ready, user-facing applications end to end. Skilled at translating stakeholder requirements into secure, scalable features spanning RESTful APIs, JWT-based authentication, and third-party payment integrations. Quick to pick up new tools and best practices, with a strong grounding in data structures, algorithms, and system design that supports building reliable, performant, and observable software in collaborative, fast-moving team environments.

PROJECTS

CineVerse — Movie Ticket Booking Platform | MongoDB · Express.js · React.js · Node.js

- Engineered a full-stack MERN booking platform end to end, applying sound engineering and API design principles to give users a fast, seamless flow from browsing movies to confirmed payment.
- Implemented JWT authentication and protected routes, improving account security and giving users confidence that their sessions and personal data stay protected.
- Integrated the Stripe payment gateway to process online payments reliably, reducing checkout friction and eliminating failed or unclear transaction states for users.
- Designed and consumed RESTful APIs for listings, bookings, and user operations, then deployed on Vercel to keep the app consistently available and responsive at scale.

OpenBankX — Digital Banking Platform | MongoDB · Express.js · React.js · Node.js

- Built a secure digital banking platform, working through user requirements for authentication and account management to deliver a trustworthy, easy-to-navigate experience.
- Developed scalable REST APIs for transaction processing and user management, improving reliability and response times as usage grew.
- Implemented backend validation and authorization and optimized database operations, reducing query latency and strengthening data integrity for every user transaction.

Secure Justice — Legal Assistance Platform | MERN Stack

- Collaborated with a cross-functional team using Git-based workflows to gather requirements and iteratively improve accessibility to legal resources for underserved users.
- Designed responsive, accessibility-first interfaces so users on any device could find and use legal resources with minimal friction.
- Built scalable backend services with usability as a core design goal, incorporating feedback from teammates to continuously refine the technical solution.

SKILLS

Languages: Java, Python, JavaScript, TypeScript

Development: React.js, Next.js, Node.js, Express.js, MongoDB, REST APIs, JWT Authentication, Stripe Integration

Tools & Platforms: Git, GitHub, Postman, Docker, Tailwind CSS, Bootstrap, Vercel

Core Competencies: Data Structures & Algorithms, Object-Oriented Programming, System Design, Software Engineering, Performance & Reliability

EDUCATION

Lovely Professional University

Aug 2025 – Jul 2029

Bachelor of Technology in Computer Science Engineering | CGPA: 9.34

Coursework: Full-Stack Web Development, Data Structures & Algorithms, System Design, Databases

CERTIFICATIONS & ACHIEVEMENTS

- Maintained a CGPA of 9.34 in B.Tech Computer Science Engineering.
- Solved 100+ Data Structures & Algorithms problems across LeetCode and GeeksforGeeks.
- Participated in the GeeksforGeeks 24-Hour Full-Stack Web Development Hackathon.
- Completed The Complete Web Development Bootcamp on Udemy.
- Built and deployed multiple full-stack MERN applications.
